Implement Specs Overdue.mc x PowerShell x + v

Current Sessions Issues Pull requests Gists

constructor allows for past due dates. I'll create three tasks: one overdue, one done, and one due tomorrow.

I want to mock 'repository.findAll()' to return an unsorted list, and then check that 'service.vencidas' returns this list sorted by due date in ascending order (prioritizing the most overdue first). I can use the 'TaskOrders.POR_FECHA' comparator in the spec, but I can also assert order by task ID or due date.

Next, I'll modify 'TaskService.java' to add the 'vencidas' method and adjust 'TaskController.java' for the mapping. I'll also need to make edits to the test files. I can use 'functions.edit' for each of these files-specifically four edits-so I'll efficiently handle multiple edits in one response! I'll establish insertion points in 'TaskService.java' near the end, just before the closing brace.

- Adding the overdue method and controller endpoint, plus tests. Edits will modify TaskService.java, TaskController.java, TaskServiceTest.java and TaskControllerTest.java. Applying surgical replacements now.

JV

Read TaskService.java 125 lines read

Thought for 1s

I see that there's no existing method for vencidas. I need to create a public List<Task> vencidas() method that retrieves all tasks using repository.findAll(), filters them with Task::estaVencida, and sorts them using TaskOrders.POR_FECHA before converting to a list. That should give me the overdue tasks I need. Now, I'll open TaskOrders.java to proceed with the changes. It's essential to get this part right!

JV

Read TaskOrders.java 52 lines read

JV

Read TaskController.java 138 lines read

JV

Read TaskServiceTest.java 168 lines read

Thought for 2s

I see that TaskServiceTest currently lacks vencidas tests, so I need to make some modifications. I know I can edit the TaskServiceTest.java file. I'll add nested tests specifically for vencidas by creating several Task objects with due dates. I wonder if I need to import LocalDate since the Task model might use it. I should inspect the Task model to confirm that. This is exciting!

JV

Read Task.java 264 lines read

Thought for 3s

I'm working on implementing Task.estaVencida, which is great! Next, I need to add the TaskService.vencidas() method. After that, I'll update the TaskController to include this new mapping-essential for keeping everything organized. Then, I'll go ahead and update the tests to ensure everything works correctly. Finally, I'll open the TaskControllerTest file to verify that everything is in place. It's a bit of a process, but it's all coming together!

JV

- Model changed from gpt-5.6-terra (medium) to gpt-5-mini (medium) for this session

> Corrige solo esto y solo en las líneas que agregaste en esta rama (git diff main): el slice de GET /tasks/overdue no debe afirmar un orden, porque la lista la inventa el mock: que el mock devuelva una sola tarea y el test compruebe el 200, el id y el title de esa tarea, y que su nombre no diga orden. No modifiques los tests que existían antes de tu cambio. Al terminar corre mvn -q test.

04:00

Thought for 1s

I need to inspect the changes with 'git diff main'. I can use PowerShell to run the command 'git diff main --unified=0' to focus on the added lines. It's important to ensure I'm looking at these specific changes, as that will help clarify what's been modified. So, I'll run the command now to check what's been added versus what's in the main branch. Let's see what the output shows!

- Running git diff against main to find the lines added in this branch so only those lines are edited. Then will open the slice controller and test files to apply the minimal change. Running: git --no-pager diff main --unified=0 -- path filters omitted.

\$ Shell Show diff against main to identify added lines in this branch 147 lines...
git --no-pager diff main --unified=0

- Editing the slice test to mock a single task and assert status, id and title; renaming test to avoid "orden" in name. Applying a single, surgical edit to the added block in TaskControllerTest.java.

JV Edit TaskControllerTest.java +6 -9

\$ Shell Run the test suite to verify changes 7 lines...
mvn -q test

23s

Thought for 1s

I need to check the output file to confirm if the tests passed. Should I use functions.view on the temp file? But it seems that tool view is only for repo files. Instead, I could use read_powershell. There's a shellId from powershell that returned shellId 1. So, I'll go ahead and use read_powershell to get the output with shellId 1. Maybe I should add a delay of 1 too. Alright, let's call read_powershell!

- Read shell output Waiting up to 1 second for command output 1 line...

\$ Shell Show last 200 lines of mvn test output 7 lines...
Get-Content -Path C:\Users\Tsuna72\AppData\Local\Temp\1789812096556-copilot-tool-output-26088-53b9bcaa-9169-4556-8...

- He corregido únicamente las líneas añadidas en esta rama: src/test/java/com/taskflow/slice/TaskControllerTest.java.
 - Renombré el test a getTasksOverdue_retorna200YUnaTarea.
 - El mock devuelve ahora una sola tarea y el test verifica 200, el id y el title (no afirma orden).

Ejecutando mvn -q test → la suite terminó correctamente (exit code 0). ¿Quieres que haga commit de este cambio?

● MCP Servers reloaded: 1 server connected

> Implementa la especificación de specs/unassigned.md al pie de la letra. Cuando termines, corre mvn -q test y confirma que 04:36
pasa.

v Thought for 6s
I'm looking at the repository's root and the paths for specific files, like 'specs/unassigned.md' and 'pom.xml'. It seems that I
can view directories and files up to two levels deep. I want to focus on understanding the specifications while also checking the
project setup. I'll use 'functions.view' to get a look at these paths, and then I'll make a plan based on the specifications once
I've gathered enough information.

The user wants me to run 'mvn -q test' after implementing the plan to confirm it passes. I need to ask any clarifying questions
during the planning phase if something seems ambiguous. Once I finish writing 'plan.md', I should present a summary for user
approval by exiting plan mode instead of just asking questions. It's crucial to ensure the plan is confirmed before going ahead
with the implementation!

The 'exit_plan_mode' tool needs a summary and optional showFleet and recommendedAction, but it looks like I don't really need to
use showFleet here. Since the plan likely has multiple tasks, I should set showFleet to false. I might recommend interactive
actions. Before exiting, I need to create 'plan.md' with a summary of the problem, approach, and todos, all in Spanish since
that's needed. I'll also insert todos into the SQL database, ensuring proper IDs and statuses. I'll handle everything
systematically!

Implement Specs Unassigned X PowerShell X + v

Current Sessions Issues Pull requests Gists

JV Edit TaskServiceTest.java +4510s

Thought for 4s

I'm thinking about how to edit TaskControllerTest to add a new slice test. I'll probably insert this test method after the getTasksOverdue test. I need to locate the correct code chunk to replace, maybe placing the new test before getTaskPorId or right after getTasksOverdue. I should focus on replacing the end of the getTasksOverdue method with the new method. Let's craft the old_str from the end of that method. Then, I'll replace it accordingly.

I'm working on a new test method called getTasksUnassigned_retorna200VAssigneeNull. First, I'll create two Task objects, t4 and t6, representing unassigned tasks. I'll use when(taskService.sinResponsable()) to simulate their return. Next, I'll perform the mockMvc call to get the unassigned tasks, then check that the response status is OK and that the assigneeId is null using the fully qualified org.hamcrest.Matchers.nullValue() - so no import needed there. I'm ready to perform the edit!

JV Edit TaskControllerTest.java +18

Thought for 1s

I'm about to run mvn -q test using the PowerShell tool. I want to explain this action since it's important to follow the preToolPreamble. The reason for running this command is to execute tests quietly to check that everything works as expected. I'll be using the functions.powershell command and setting the initial wait to 120 seconds, just to be on the safe side, in case the tests take longer than expected. Let's get this done!

\$ Shell Run Maven tests 7 lines...3m 44s

mvn -q test

Thought for 1s

It looks like the tests failed with an exit code of 1. I need to read the output to identify the failures. I'm considering whether to use the read_powershell function to do so since we have shellId 12. The Powershell tool already saved the output to a temp file, so I think I'll go ahead and call read_powershell with shellId 12 and add a delay of 1 to retrieve the output. Let's see what it says!

Read shell output Waiting up to 1 second for command output 1 line...

Read 1789815240564-copilot-tool-output-26088-3e39e001-5a0b-4f81-ab0a-ba51d7323d71.txt 1 line read

/ Search "'D2'" in **/*TaskServiceTest.java (src/test/java) 1 line found

JV Edit TaskServiceTest.java +1 -17s

\$ Shell Run Maven tests 7 lines...1m 33s

mvn -q test

Read 1789815370134-copilot-tool-output-26088-598a7446-440a-41cb-8032-5c636106bf39.txt L1:200 (125 lines read)

Read 1789815370134-copilot-tool-output-26088-598a7446-440a-41cb-8032-5c636106bf39.txt L180:400 (11 lines read)

He implementado la especificación de specs/unassigned.md, añadí los tests y ejecuté la suite.

Cambios principales:

src/main/java/com/taskflow/service/TaskService.java - método sinResponsable() (usa ReportService.SIN_ASIGNAR y TaskOrders.POR_FECHA)

src/main/java/com/taskflow/controller/TaskController.java - endpoint GET /tasks/unassigned

src/test/java/com/taskflow/unit/TaskServiceTest.java - @Nested SinResponsable con los dos casos especificados (orden y vacío)

src/test/java/com/taskflow/slice/TaskControllerTest.java - slice test para /tasks/unassigned (200 + assigneeId=null)

Validación:

mvn -q test - pasó correctamente (exit code 0).

¿Procedo a commitear los cambios o quieres revisarlos primero?

Fix Failing Tests - GitHub Copi PowerShell

Current Sessions Issues Pull requests Gists

/ Search "FAILURES" (mvn-output.txt) 19 lines found

Thought for 2s

I see that the grep command indicates a failing test: com.taskflow.unit.TaskServiceTest\$Vencidas, and there's only one failure. I need to check its stack trace to understand what went wrong. My next step is to search for "TaskServiceTest\$Vencidas" in the mvn-output.txt file to find the error details. It's crucial to pinpoint the exact issue so I can address it efficiently!

/ Search "TaskServiceTest\$Vencidas" (mvn-output.txt) No matches found

/ Search "Failures:" (mvn-output.txt) 18 lines found

Thought for 1s

I need to locate the detailed failure stack trace in the earlier part of the file. I'll search for the phrases "<<< FAILURE!" or "There was 1 failure" to pinpoint the issue. Using grep seems like a good approach for "<<< FAILURE!" and "1)", as these indicators will help me find the list of failures effectively. Time to grep for "1)" to get the relevant information!

/ Search "<<< FAILURE!" (mvn-output.txt) 2 lines found

/ Search "vencidas_filtroSoloVencidasYOrdenaPorFecha" (mvn-output.txt) 3 lines found

JV Read TaskServiceTest.java 247 lines read

Thought for 1s

I need to check the service.vencidas() method because the test expects it to return two tasks, vencida1 and vencida2, but it's only returning one. That suggests there's likely an issue with how the service is implemented. I'll open the TaskService.vencidas method at the specified path in the source code. Let's see what I can find there to figure out what went wrong!

JV Read TaskService.java 147 lines read

Thought for 1s

I think the function vencidas() looks correct since it filters Task::estaVencida and sorts by date. But why does the test return only one task? I'm considering the logic in Task.estaVencida, which might be excluding tasks that are IN_PROGRESS or only checking for due dates and not the status being DONE. I'll need to look into the Task model in src/main/java/com/taskflow/model/Task.java to figure this out.

JV Read Task.java 264 lines read

Thought for 4s

I need to revise the implementation of 'estaVencida()'. Right now, it's checking if the 'dueDate' is after today, which is incorrect for what I want to achieve. I should be using 'isBefore(LocalDate.now())' to indicate that the task is overdue. If a task's due date is yesterday, 'isBefore()' works, so that must be the approach. I'll change the method's logic to ensure it properly reflects the intended definition, possibly adding 'isEqual()' as well to cover due dates that fall on today. I'll make those edits in 'Task.java'.

I need to use 'functions.edit' to update the method. The 'old_str' needs to match from the method's starting line to the closing brace. I'm crafting the 'old_str' as follows: "public boolean estaVencida() {\n return dueDate != null && dueDate.isAfter(LocalDate.now()) && status != TaskStatus.DONE;\n }". And for the 'new_str', I want it to reflect the correction: "public boolean estaVencida() {\n return dueDate != null && dueDate.isBefore(LocalDate.now()) && status != TaskStatus.DONE;\n }". Now I'll call 'functions.edit' to apply the changes.

JV Edit Task.java +1 -15s

\$ Shell Run Maven tests 7 lines...2m 4s

mvn -q test

Arreglando y verificando: ejecuté la suite de pruebas para reproducir fallos, identifiqué 1 test unitario fallido (TaskServiceTest\$Vencidas) y corregí la lógica en com.taskflow.model.Task.estaVencida() (usaba isAfter en lugar de isBefore). Ejecuté mvn -q test de nuevo: la suite pasó OK (exit code 0).

Cambio realizado:

• src/main/java/com/taskflow/model/Task.java - estaVencida(): uso de dueDate.isBefore(LocalDate.now()) en lugar de isAfter.

Test no valida el orden de las tareas vencidas

La spec de /tasks/overdue pide que el slice verifique que el JSON trae las tareas en orden. Con una sola tarea el test no valida ese contrato ni que el controller preserve el orden del listado.

This issue also appears on line 117 of the same file.

Falta probar que tareas sin dueDate queden excluidas

El unit test de vencidas no incluye el caso de una tarea con dueDate == null, que según la spec debe quedar fuera del resultado. Si alguien rompe esa regla (por ejemplo, tratando null como "vencida"), este test hoy no lo detecta.

▼ Thought for 4s

I need to determine if all the tests passed. The mvn command indicated a successful exit code of 0, which suggests success. However, it's best to check the end of the output file for a summary that includes "BUILD SUCCESS." The file has 191 lines, and I previously viewed until the end. Since the last lines may have been truncated, I should search for "BUILD SUCCESS" for clarity. I can use functions.grep for this or run a simplified mvn command to verify results.

I need to run 'mvn -q test' and provide a summary of which comments applied and which didn't, along with reasons. For example, comment #2 applied, but #1 did not because it requested a test order in a slice that the user had forbidden. Also, the spec requires that slices shouldn't test order. Confirming tests passed with an exit code of 0 means the suite likely succeeded, but I should check for "BUILD SUCCESS" in the log file. I'll use functions.grep and review lines 180-191 again for a complete summary.

I'll execute a command like 'mvn -DskipTests=false -DfailIfNoTests=false test -DtrimStackTrace=false' to ensure I receive a summary, even though it's a bit heavy. I'm considering using "echo %ERRORLEVEL%", but that feels unnecessary. Instead, I can run "mvn -q test" and check success or failure by utilizing "%\$ echo SUCCESS || echo FAIL." I prefer to run it non-quiet to get the final summary quickly and show "BUILD SUCCESS." Lastly, I'll run 'mvn -DskipTests=false test -DskipITs -DtrimStackTrace=false' and set the PowerShell wait time to 120 seconds.

\$ Shell Run full test suite (non-quiet) to get build summary 14 lines...31s
cd "F:\Academia Monterrey\Semana_6\taskflow-copilot-jdhernandez04" ; mvn test -DskipITs -DtrimStackTrace=false

▼ Thought for 1s

I'm planning to search for "BUILD SUCCESS" towards the end of the logs. It feels like a good strategy! I want to look at the last 50 lines of the output to narrow it down. So, I think I'll set the view range from 220 to 263. This should help me find the information I need without sifting through too much data. Let's see if we can find that positive confirmation of success!

● Read 1789822043732-copilot-tool-output-26088-1dd5190f-52fc-4377-8258-8c3f3c3d6ce7.txt L220:263 (43 lines read)

▼ Thought for 2s

I'm thinking about why the comment about order in the slice was not applied. The user specifically forbade modifying tests in TaskControllerTest, and that's why I can't modify it. Plus, the spec/unassigned indicates that the slice shouldn't test order, which aligns with the user's instructions against applying comments that request testing order. I should mention the list of modified files concisely to clarify the context for the user.

● Hecho - cambios aplicados y tests ejecutados.

Qué apliqué

• Comentario 2 (falta excluir tareas sin dueDate): añadido test unitario en src/test/java/com/taskflow/unit/TaskServiceTest.java (método vencidas_excluyeTareasSinDueDate) que verifica que las tareas con dueDate==null quedan fuera. Motivo: permitido (files list) y cubre la especificación faltante.

Qué no apliqué

• Comentario 1 (probar el orden en el slice TaskControllerTest): no aplicado. Motivo: pediste explícitamente no aplicar comentarios que pidan probar el orden en TaskControllerTest y la spec indica que el orden se prueba en el unit.

Otros cambios

• specs/overdue.md: reemplazada la línea solicitada por "el JSON trae el id y el title de las tareas que devuelve el servicio (el orden se prueba en el unit)".

Validación

• Ejecutado mvn -q test (luego mvn test para resumen). Resultado: BUILD SUCCESS - todos los tests pasan.

Si quieres, hago un commit con estos cambios o aplico otras revisiones permitidas.

Automate TaskFlow Login anc x PowerShell x PowerShell x + v
Current Sessions Issues Pull requests Gists

I'll make sure to keep the preToolPreamble concise!

I need to ensure I'm using the exact selectors as the user specified, like "[data-testid=\"input-username\"]".
First, I'll start with a brief sentence in Spanish to explain the upcoming action. Then, I'll proceed with the
function calls sequentially.

I'll prepare the final message with this introduction and then execute the tools in the right order. It's important
to keep everything concise and focused on the necessary content while running the functions like
functions.playwright-browser_navigate. Let's get this set up!

• Navegación e interacción en la UI vía Playwright: abriré la página, haré login con las credenciales provistas,
esperaré el texto "Plataforma TaskFlow", abriré el proyecto 1, crearé la tarea con prioridad HIGH y confirmaré que
aparece el título. Uso los selectores exactos que indicaste en cada llamada. Ejecutando los pasos ahora.

• Navigate to a URL (MCP: playwright) · http://localhost:8080 · url: "http://localhost:8080" ### Ran Playwright code

• Type text (MCP: playwright) · target: "[data-testid=\"input-username\"]", text: "ana" ### Ran Playwright code
• Type text (MCP: playwright) · target: "[data-testid=\"input-password\"]", text: "ana123" ### Ran Playwright code

• Click (MCP: playwright) · target: "[data-testid=\"btn-login\"]" ### Ran Playwright code

• Wait for (MCP: playwright) · text: "Plataforma TaskFlow", time: 10 ### Result 10s

• Navigate to a URL (MCP: playwright) · http://localhost:8080/project.html?id=1 · url: "http_... ### Ran Playwright code

• Click (MCP: playwright) · target: "[data-testid=\"btn-new-task\"]" ### Ran Playwright code

• Type text (MCP: playwright) · target: "[data-testid=\"input-task-title\"]", text: "Revisar a... ### Ran Playwright code

• Select option (MCP: playwright) · target: "[data-testid=\"select-task-priority\"]", values: ... ### Ran Playwright code

• Click (MCP: playwright) · target: "[data-testid=\"btn-save-task\"]" ### Ran Playwright code

• Wait for (MCP: playwright) · text: "Revisar accesibilidad del login", time: 10 ### Result 10s

• Close browser (MCP: playwright) ### Result

• He completado la interacción: inicié sesión como ana, verifiqué "Plataforma TaskFlow", abrí el proyecto 1, creé la
tarea "Revisar accesibilidad del login" con prioridad HIGH y confirmé que apareció en la página. El navegador ya
está cerrado. ¿Deseas que suba una captura de la pantalla o que repita la acción con otra tarea/usuario?

Listar Tareas Vencidas y Crear

PowerShell

PowerShell

CurrentSessionsIssuesPull requestsGists

I need to include a short Spanish sentence explaining that I'm running two TaskFlow API calls to list expired tasks and projects for obtaining project names. Next, I'll call `multi_tool_use.parallel` with two calls: the first for `functions.taskflow-listar_tareas_vencidas` with no parameters, and the second for `functions.taskflow-listar_proyectos`, also with no parameters. After getting those results, I'll map the `projectId` to find the project name and create issues using the format "Tarea vencida #<id>: <title>", including details in Spanish. Then I'll use `functions.github-mcp-server-issue_write` to create the issues accordingly.

After creating the issues, I'll report how many issues were created to keep things transparent. For the second `multi_tool_use.parallel` call, I'll include an array of `functions.github-mcp-server-issue_write` calls, one for each task. It's possible there could be zero expired tasks, in which case I need to inform the user that no issues were created. I have to keep in mind that `taskflow-listar_tareas_vencidas` may return tasks with `projectIds` that aren't found in the results from `taskflow-listar_proyectos`, but I'll map them accordingly. Let's get ready to call!

- Obteniendo en paralelo la lista de tareas vencidas y la lista de proyectos para poder convertir `projectId` en nombre de proyecto; luego crearé un issue por cada tarea vencida con los campos solicitados. Ejecutando las llamadas a la API.
- `skill(customize-cloud-agent)`

Thought for 1s

I need to implement the logic after the parallel call returns. The plan is to parse the results and then make successive tool calls to create issues all at once in a single response. The tools will be functions, so I'll use another `multi_tool_use.parallel` to create multiple issues. It's important to craft the parameters carefully. First, I'll call the initial function and use the commentary channel to set up a `preToolPreamble` before proceeding with the parallel execution.

- Obteniendo en paralelo las tareas vencidas y la lista de proyectos para resolver `projectId`→nombre; después crearé un issue por cada tarea vencida con título y cuerpo solicitados. Ejecutando llamadas API. Luego crearé los issues en paralelo.
- `listar_tareas_vencidas` (MCP... [{"id":7,"title":"Corregir bug de fechas","description":"Zona horaria en el c... 3m 0s

PS F:\Academia Monterrey\Semana_6\taskflow-copilot-jdhernandez04> copilot skill list
Project skills:
  crear-endpoint-taskflow - Crea un endpoint REST nuevo en TaskFlow API (Spring Boot 3.5, Java 21) con las convenciones del proyecto - DTO record, mapper manual, método en el service que ya inyecta el controller reutilizando las reglas del dominio, controller sin prefijo /api, test unitario con Mockito y test slice con @WebMvcTest en clases nuevas, y mvn -q test al final. Úsala siempre que pidan agregar, implementar o exponer un endpoint o una ruta GET/POST/PUT/PATCH/DELETE de TaskFlow, o implementar una especificación o un issue de la API.
  verificar-taskflow - Verifica TaskFlow API de punta a punta con la app arrancada de verdad - empaqueta, arranca con el perfil h2 en segundo plano, hace login y comprueba GET /tasks/overdue, GET /tasks/unassigned y GET /projects/{id}/summary contra los datos de la semilla, y apaga la app al final. Úsala cuando pidan verificar, probar contra la app corriendo, hacer un smoke test o comprobar que los endpoints responden lo esperado antes de un PR.

Builtin skills:
  customize-cloud-agent - Skill for customizing the Copilot cloud agent (formerly known as Copilot coding agent) environment, including copilot-setup-steps.yml configuration, preinstalling tools and dependencies, runners, and settings. Use when the user mentions copilot-setup-steps, copilot setup steps, or wants to configure the cloud agent environment.
  github-pr-media - Upload an image or video to GitHub's user attachments API and embed it in a pull request description or comment. Use when asked to add screenshots, diagrams, recordings, or other media to a PR or GitHub comment.

create mode 100644 .github/agents/tester.agent.md
PS F:\Academia Monterrey\Semana_6\taskflow-copilot-jdhernandez04>
PS F:\Academia Monterrey\Semana_6\taskflow-copilot-jdhernandez04> git diff main --output evidencia\dia4\summary.diff src

PS F:\Academia Monterrey\Semana_6\taskflow-copilot-jdhernandez04> copilot --agent revisor -p "Revisa evidencia\dia4\summary.diff contra la especificación specs\summary.md." --max-ai-credits 30 --share evidencia\dia4\revision.md
● Read summary.diff
  | evidencia\dia4\summary.diff
  | 276 lines read

● Read summary.md
  | specs\summary.md
  | 65 lines read

● Read ProjectController.java
  | src\main\java\com\taskflow\controller\ProjectController.java
  | 145 lines read

● Read TaskStatus.java
  | src\main\java\com\taskflow\model\TaskStatus.java
  | 23 lines read

Con este contexto, la revisión queda completa. No hay conflicto de rutas ('/summary' es literal, distinto de '/tasks' y no ambigua con '{id}'). Reviso el resto de contrato/detalles.

| # | Gravedad | Archivo:línea | Punto checklist | Qué pasa | Qué harías |
|---|---|---|---|---|---|
| 1 | Sugerencia | 'ProjectController.java:90-99' | Comentario/Javadoc | El Javadoc dice "404 uniforme si no existe" pero no repite la nota de otros métodos sobre delegar en el service; está bien, solo falta anotar '@Operation' con el 401 implícito (no es obligatorio, es consistente con el resto del archivo que tampoco lo hace). | No cambiar, es consistente con el estilo existente. |
| 2 | Sugerencia | 'ResumenProyectoServiceTest.java:37' | Reglas del dominio / Tests | El test unit no cubre explícitamente el caso "tarea con 'dueDate' futura no cuenta como vencida" ni "tarea 'TODO'/'IN_PROGRESS' sin dueDate"; si lo cubre indirectamente (tareas 1 y 2 tienen 'dueDate=null'). Suficiente pero podría ser más explícito. | Dejar así, cubre el caso funcionalmente aunque no de forma tan legible. |

**Casos sin test:** ninguno - el spec pide: proyecto con tareas en los tres estados y una vencida (cubierto en 'ResumenProyectoServiceTest.resumen_tresEstadosYUnaVencida'), proyecto sin tareas ('resumen_proyectoSinTareas_todoEnCero'), 200 del controller con el JSON completo y 404 con proyecto inexistente (ambos en 'ResumenProyectoControllerTest'). No se agregó test de 401 (sin token), pero el spec dice que ese comportamiento es "como todo lo que no es público" y no pide un test nuevo para eso - es cubierto por la seguridad global, no por este endpoint específico.

**Verificaciones adicionales:**
- Alcance: solo tocó 'ProjectController', 'ProjectSummaryResponse' (nuevo), 'ProjectMapper', 'ProjectService', y dos tests nuevos. No tocó 'SecurityConfig', 'pom.xml', 'application*.yml' ni 'DataSeeder'. ✓
- No modifica ni borra tests existentes (todo el diff en 'src/test/' son archivos nuevos '+++', sin líneas '-'). ✓
- Reutiliza 'Task.estaVencida()' en el service, no reescribe la regla. ✓
- Contrato: campos 'projectId', 'projectName', 'totalTasks', 'byStatus', 'overdue' - nombres y tipos coinciden con el spec. Ruta sin '/api'. 404 vía 'ProjectNotFoundException' (mismo patrón que 'GET /projects/{id}'). ✓
- 'byStatus' siempre trae las tres claves (usa 'EnumMap' iterando 'TaskStatus.values()') incluso en 0. ✓
- Convenciones: DTO 'record', mapper manual, lógica en el service, inyección por constructor, sin Lombok. ✓

Veredicto: APROBADO

PowerShell PowerShell PowerShell
esion.md
• Read revision.md
  | evidencia\dia4\revision.md
  | 1 line read

• Read summary.md
  | specs\summary.md
  | 65 lines read

• Buscar sección Casos sin test (shell)
  | Select-String -Path "F:\Academia Monterrey\Semana_6\taskflow-copilot-jdhernandez04\evidencia\dia4\revision.md"
  | -Pattern "Casos sin test" -Context 0,40
  | 28 lines...

• Buscar archivos de test de resumen (shell)
  | Get-ChildItem -Path "F:\Academia Monterrey\Semana_6\taskflow-copilot-jdhernandez04\src\test\java\com\taskflow"
  | -Recurse -Filter "*Resumen*"
  | 12 lines...

• Read ResumenProyectoServiceTest.java
  | src\test\java\com\taskflow\unit\ResumenProyectoServiceTest.java
  | 71 lines read

• Read ResumenProyectoControllerTest.java
  | src\test\java\com\taskflow\slice\ResumenProyectoControllerTest.java
  | 65 lines read

Los tests existentes ya cubren todos los casos que pide 'specs/summary.md':

- **unit** 'ResumenProyectoServiceTest': proyecto con tareas en los tres estados + una vencida ('resumen_tresEstadosYUnaVencida'), y proyecto sin tareas con todo en cero ('resumen_proyectoSinTareas_todoEnCero').
- **slice** 'ResumenProyectoControllerTest': 200 con el JSON completo ('getSummary_existente_devuelve200ConCadaCampo') y 404 con proyecto inexistente ('getSummary_proyectoInexistente_devuelve404').

La sección "Casos sin test" de 'evidencia/dia4/revision.md' confirma "ninguno" - el único caso no cubierto explícitamente (401 sin token) no lo pide el spec como test nuevo, ya que es seguridad global, no lógica del endpoint.

Como no falta ningún caso, no escribí tests nuevos. No corrí 'mvn test' porque no hice cambios de código.

Confirmado: `findByProjectId` ya existe, no se agregó ningún método a los repositorios. Con esto tengo todo lo necesario para la revisión.

## Revisión de `semana6/proyecto-final.diff` contra `specs/progress.md`

| # | Gravedad | Archivo:línea | Punto de la checklist | Qué pasa | Qué harías | |
|---|---|---|---|---|---|---|
| 1 | Sugerencia | `ProjectService.java` | (nuevo método `progresoPorProyecto`) | 3. Reglas del dominio | El cálculo del porcentaje no reutiliza `ReportService.porcentajeCompletadas()` (aunque aplica la misma "trampa long/long" con `* 100.0` antes de dividir, correctamente). No hay una regla existente reutilizable per-proyecto, así que reescribir es razonable, pero vale la pena dejarlo explícito. | Ninguna acción obligatoria; solo señalarlo como verificado, no como defecto. |
| 2 | Sugerencia | `ProjectService.java` | `Math.round(done * 100.0 / total * 10.0) / 10.0` | 3. Reglas del dominio (redondeo) | Funciona correctamente para los casos de la spec (20.0, 33.3, 12.5), pero mezclar `Math.round` (long) con literales double es un poco más difícil de leer que usar `BigDecimal` o `Math.round(x*10)/10.0` con una variable intermedia nombrada. | Dejar como está; no bloquea, es puramente estilístico. |

No encontré hallazgos que bloqueen o deban corregirse:

```

PS F:\Academia Monterrey\Semana_6\taskflow-copilot-jdhernandez04> git log --oneline -1 merges
fatal: ambiguous argument 'merges': unknown revision or path not in the working tree.
Use '--' to separate paths from revisions, like this:
'git <command> [<revision>...] -- [<file>...]'
PS F:\Academia Monterrey\Semana_6\taskflow-copilot-jdhernandez04> Copy-Item "F:\academyMty\copilot\dia-5\semana6-README.md" semana6\README.md
PS F:\Academia Monterrey\Semana_6\taskflow-copilot-jdhernandez04> git log --oneline -1
5cfbd16 (HEAD -> main, origin/main) Merge pull request #5 from JDHernandez04/feature/progress
PS F:\Academia Monterrey\Semana_6\taskflow-copilot-jdhernandez04> push -NoProfile -File .github/skills/verificar-taskflow\verificar.ps1
Repositorio: F:\Academia Monterrey\Semana_6\taskflow-copilot-jdhernandez04
URL de la app: http://127.0.0.1:8080
Empaquetando con Maven (mvn -q package -DskipTests), tarda unos segundos...
App arrancando (PID 27480). Esperando a que /info responda...
App lista en 5 s.
[OK] GET /tasks/overdue devuelve solo la tarea 7
[OK] GET /tasks/unassigned devuelve las tareas 4 y 6
[OK] GET /projects/1/summary
[OK] GET /projects/2/summary
[OK] GET /projects/3/summary
[OK] GET /projects/99/summary responde 404
[OK] GET /projects/1/summary sin token responde 401
F:\Academia Monterrey\Semana_6\taskflow-copilot-jdhernandez04> .github/skills/verificar-taskflow\casos-progress.ps1
App detenida (PID 27480).
[OK] App apagada: el puerto 8080 ya no responde
RESULTADO: 8/8 OK
PS F:\Academia Monterrey\Semana_6\taskflow-copilot-jdhernandez04> mvn test | Select-String -CaseSensitive 'Tests run:.*Skipped: \d+&' | Select-Object -Last 1
Mockito is currently self-attaching to enable the inline-mock-maker. This will no longer work in future releases of the JDK. Please add Mockito as an agent to your build as described in Mockito's documentation: https://javadoc.io/doc/org.mockito/mockito-core/latest/org.mockito/org/mockito/Mockito.html#0.3
OpenJDK 64-Bit Server VM warning: Sharing is only supported for boot loader classes because bootstrap classpath has been appended
WARNING: A Java agent has been loaded dynamically (C:\Users\Tsuna72\.m2\repository\net\bytebuddy\byte-buddy-agent\1.17.6\byte-buddy-agent-1.17.6.jar)
WARNING: If a serviceability tool is in use, please run with -XX:+EnableDynamicAgentLoading to hide this warning
WARNING: If a serviceability tool is not in use, please run with -Djdk.instrument.traceUsage for more information
WARNING: Dynamic loading of agents will be disallowed by default in a future release

[INFO] Tests run: 79, Failures: 0, Errors: 0, Skipped: 0
